

# Smart home gives independence back to the disabled

According to the UN, there are 1 billion people with some form of disability. Only in South Korea there are over 2 million (2,683,400) persons with disabilities. And 25% of people with disabilities are reporting they often don't have any choice and control over their daily lives. For them, the smart home products could improve their lives and give independence back to them.

- Voice control
- Using smartphone to control
- Your family members could know that if someone gets into trouble
